

### **Stopwatch widget**

The stopwatch widget i have added to the app can be useful in matters of measuring how long something can be done. For example in sports it is used to measure how long an athlete can complete a race, or how long a swimmer can take to swim, likewise we can use it to time how long can one person can speak during presantation.

The application has got for buttons:

**Start :** it is used to start the counter when clicked

**Stop :** this button is used to stop the running counter

**Reset :** the button is used to reset the stopwatch counter by returning the displays to 00:00:00:00

**Lap :** this button is used to count and display the number of laps(rounds) made by an athlete on the track

**Close :** it is used to remove a widget from the display

**Add widget :** used to add widgets to the display

**Drop down menu:**

The drop downs contains values : Left,Right,Center,Floating and Main, which are used to place the widgets.

**Right :** places a widget to the right

**Left :** places a widget to the left

**Center :** places a widget near the center

**Main :** places a widget at the center

**Floating :** arranges the widget from the top-left corner going downwards

The widget is tested and is working better
